

Automatic Undercarriage Wash System

Drive Thru Activation. Safe, Fast, & Efficient

The AUWS is an Automatic Undercarriage Washing System that solves the difficult task of cleaning heavy mud and dirt from the undercarriage of vehicles and machinery. This drive over system is fully automatic and self-cleaning. Both the approach and exit ends of the AUWS are connected to a Hydropad above ground wash rack system. It can be used as a Stand Alone Undercarriage Wash, or the AUWS may be incorporated into a fully functional wash environment. Either way, it's set in place, connected, and operating within days. Water and solids from the Hydropad's patented side gutter flow into the AUWS where its drag conveyor removes and stacks solids in a "near dry condition" for disposal.

After passing over the AUWS, the vehicle can be parked on the Hydropad where deep cleaning, detail washing is performed using Hydroblaster hot, high-pressure washers. If detail washing is not required, simply drive through and off the exit end of the Hydropad system. Hydrokleen wash water recycling equipment allows you to reuse 100% of the captured water from both the AUWS and hand washing systems.
